

ARJUN SHARMA

Backend Engineer / Software Engineer | 3 Years Experience

Bengaluru, India | +91 98765 43210 | arjun.sharma.dev@gmail.com | linkedin.com/in/arjunsharma-dev |

github.com/arjunsharma-dev

PROFESSIONAL SUMMARY

Backend Software Engineer with 3 years of experience designing and operating production services using Java, Spring Boot, Python, PostgreSQL, Redis, Kafka, Docker, and AWS. Delivered high-throughput APIs, event-driven workflows, and reliability improvements for customer-facing systems. Strong in API design, distributed systems fundamentals, SQL performance, observability, testing, CI/CD, and production debugging.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript

Backend: Spring Boot, Spring MVC, Spring Data JPA, REST APIs, Microservices, FastAPI

Databases: PostgreSQL, MySQL, Redis, MongoDB

Messaging: Apache Kafka, RabbitMQ

Cloud & DevOps: AWS (EC2, ECS, S3, RDS, CloudWatch), Docker, GitHub Actions, Linux

Engineering: System Design, API Design, Distributed Systems, Caching, Concurrency, Unit/Integration Testing

Observability: Prometheus, Grafana, ELK, Structured Logging, Metrics, Tracing

PROFESSIONAL EXPERIENCE

Software Engineer — Razorpay | Bengaluru, India | Jul 2023 – Present

- Built and maintained Spring Boot microservices supporting payment and merchant workflows; handled production traffic with p95 API latency targets below 200 ms for critical endpoints.
- Redesigned a high-volume transaction status workflow using Kafka-based asynchronous processing, idempotency keys, retry policies, and dead-letter handling, reducing synchronous processing load by 35%.
- Optimized PostgreSQL queries and indexes for transaction and merchant APIs, cutting p95 database latency by 48% and reducing peak CPU utilization by 22%.
- Implemented Redis caching for frequently accessed merchant configuration and feature data, reducing read traffic to PostgreSQL by 30% and improving p95 response time by 25%.
- Added Prometheus/Grafana dashboards, structured logs, and alerting for latency, error rate, Kafka consumer lag, and database saturation; shortened incident diagnosis time by approximately 40%.
- Improved service reliability with unit/integration tests, contract validation, graceful degradation, and automated CI checks; increased critical-service test coverage from 62% to 84%.
- Containerized services with Docker and supported AWS deployments through GitHub Actions, environment-specific configuration, health checks, and rollback-ready releases.

Software Engineer — Freshworks | Chennai, India | Jul 2022 – Jun 2023

- Developed REST APIs and backend modules for customer-support workflows using Java, Spring Boot, PostgreSQL, and Redis.
- Designed pagination, filtering, validation, and authorization layers for APIs used by internal and customer-facing applications.
- Introduced asynchronous background jobs for notification and data-processing workflows, reducing API request time by up to 40% for long-running operations.
- Refactored database access patterns and added targeted indexes, improving slow-query performance by 35% on high-traffic endpoints.
- Built automated unit and integration tests and participated in code reviews, production support, root-cause analysis, and release planning.

SELECTED PROJECTS

Real-Time Order Processing Platform | Java, Spring Boot, Kafka, PostgreSQL, Redis, AWS

- Designed an event-driven order pipeline with Kafka topics, consumer groups, idempotent processing, retries, and dead-letter queues for reliable order-state transitions.

- Added Redis-based idempotency and hot-data caching; sustained 1,500+ events/second in load testing while keeping p95 processing latency under 250 ms.
- Implemented health checks, metrics, structured logging, and dashboards to monitor throughput, consumer lag, failures, and processing latency.

Developer Analytics API | Python, FastAPI, PostgreSQL, Redis, Docker

- Built a REST API that aggregates repository activity and engineering metrics with pagination, caching, rate limiting, and background refresh jobs.
- Used PostgreSQL query optimization and Redis caching to reduce repeated aggregation work by 60% during benchmark workloads.

EDUCATION

B.Tech. in Computer Science and Engineering — Vellore Institute of Technology | 2018 – 2022

CERTIFICATIONS & ADDITIONAL

AWS Certified Developer – Associate (or equivalent hands-on AWS experience) | Data Structures & Algorithms | System Design | Agile/Scrum

ATS KEYWORDS: Backend Engineer, Software Engineer, Java, Spring Boot, Python, REST API, Microservices, Kafka, PostgreSQL, Redis, AWS, Docker, CI/CD, System Design, Distributed Systems, SQL Optimization, Caching, Concurrency, Unit Testing, Integration Testing, Observability, Prometheus, Grafana
